lordicon

Lordicon Wordpress Plugin

We have developed a free WordPress plugin that lets you
insert and customize animated .json icons in a blink of an eye.

WordPress Plug-in

Install Lordicon WordPress Plug-in

Go to: wordpress.org/plugins/lordicon-interactive-icons/
download, and install Lordicon plugin to your WordPress
administration panel.

Easily Upload
Upload icons as JSON (Lottie) format from the Lordicon library or any other Lottie animation. Don't want to host icons in Media Library? Use icon URL from the „Embed HTML".

Adjust icon
Change the size, colors or stroke size of each icon.

Triggers
Set animation on "hover", "loop", "loop with delay" or "click" and more.

Shortcode
Happy with adjustments? Copy the easy-to-read shortcode and paste it to web builders such as Divi, Elementor, or custom themes.

● NOTE: Color & Stroke controls work only with Lordicon resources. Go to lordicon.com/help into learn more how to prepare animated graphics that works with Lordicon Wordpress Plugin.
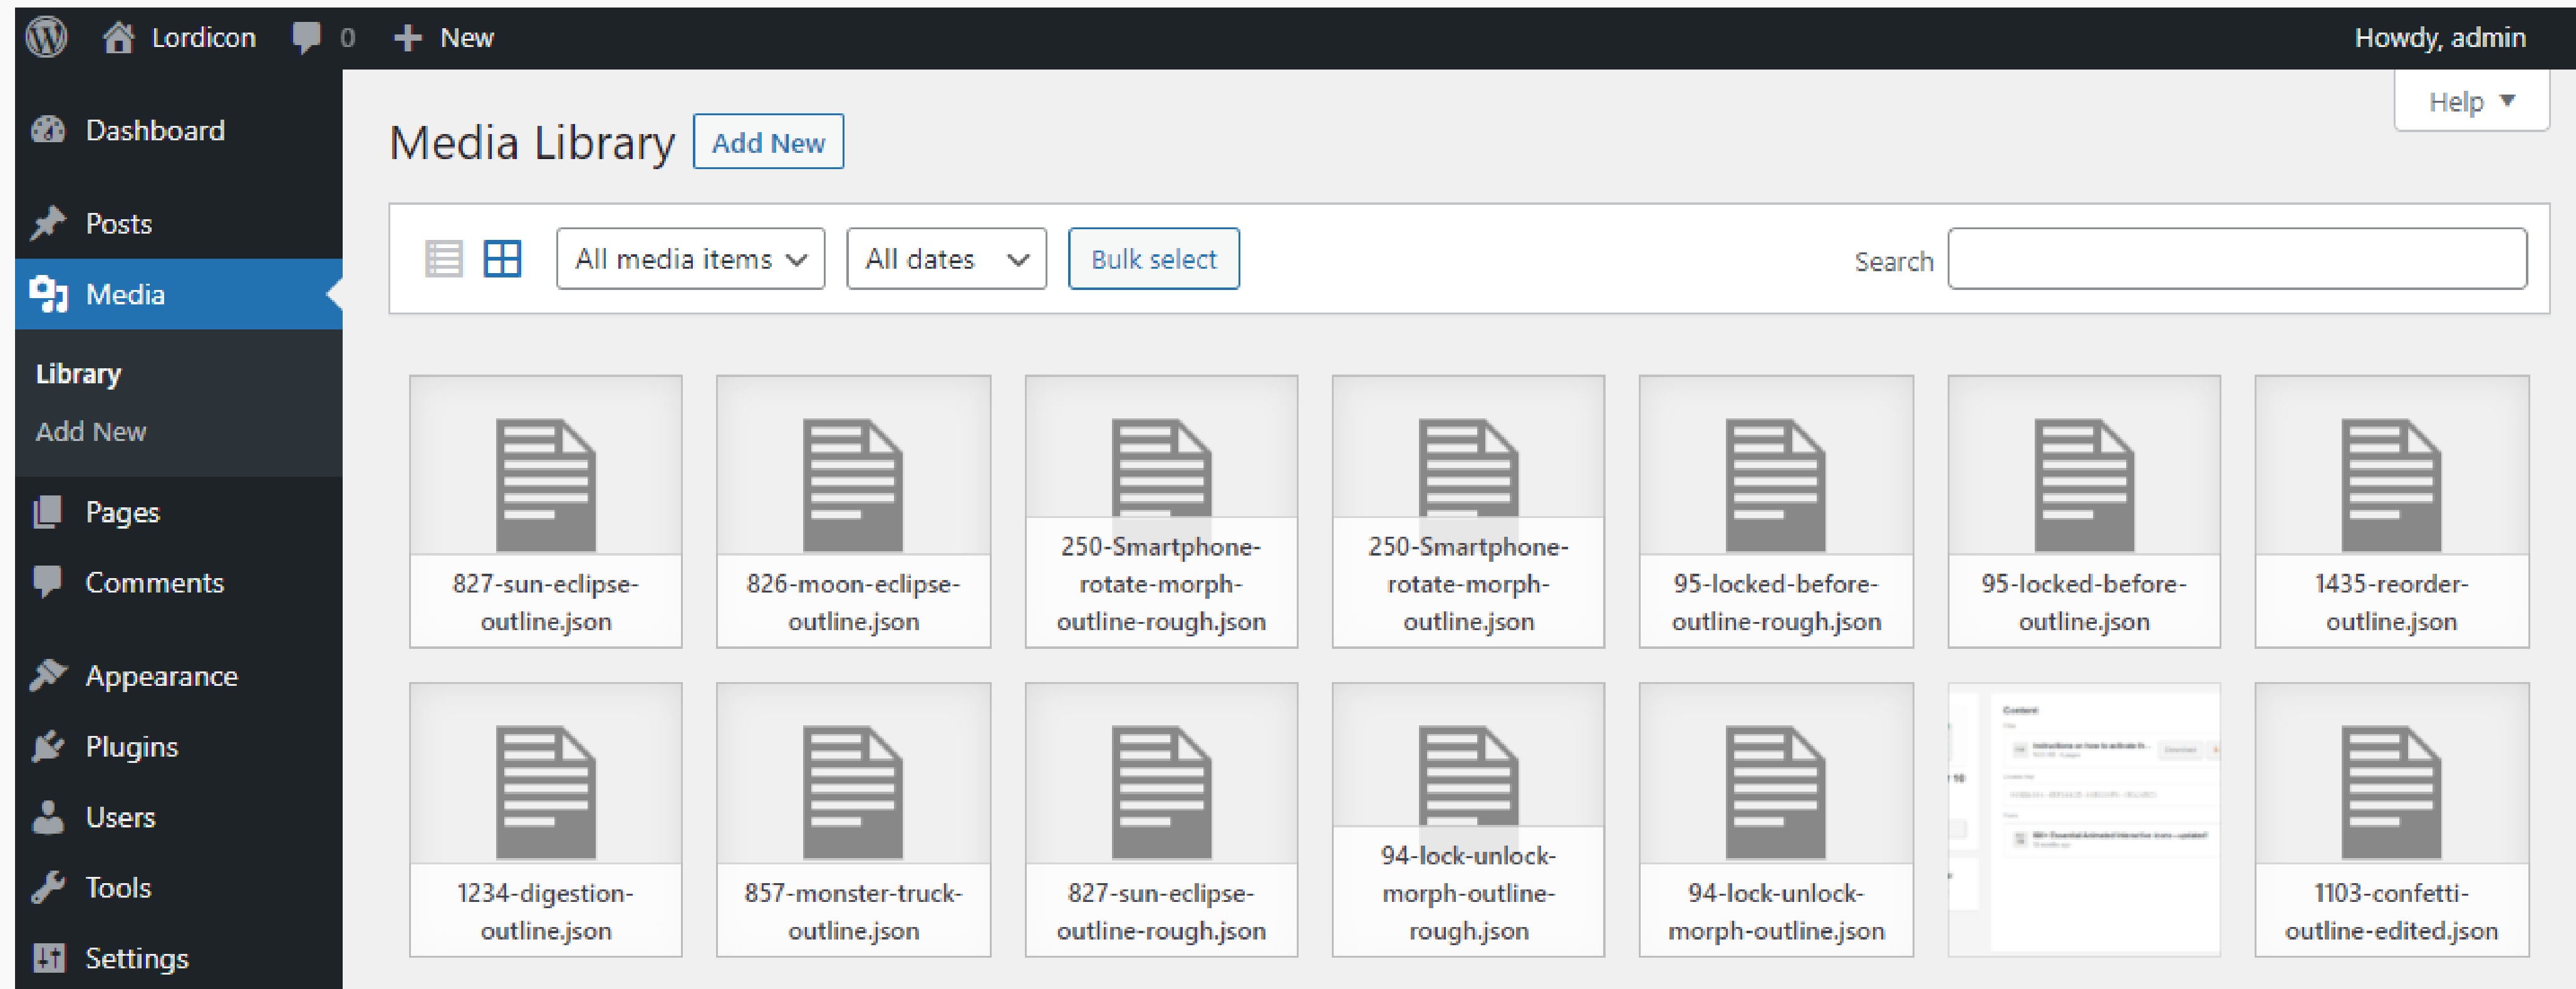

Onboarding

We use Gutenberg editor as a platform to host Lordicon WordPress Plugin. It works the best with Lottie files as it gives immediate feedback after coloring icons or setting different animation triggers.

NOTE: It doesn't mean that the Gutenberg site is the only place to use the plugin. We provide a shortcode option that lets you embed icons from Divi or Elementor web builder to a custom theme.
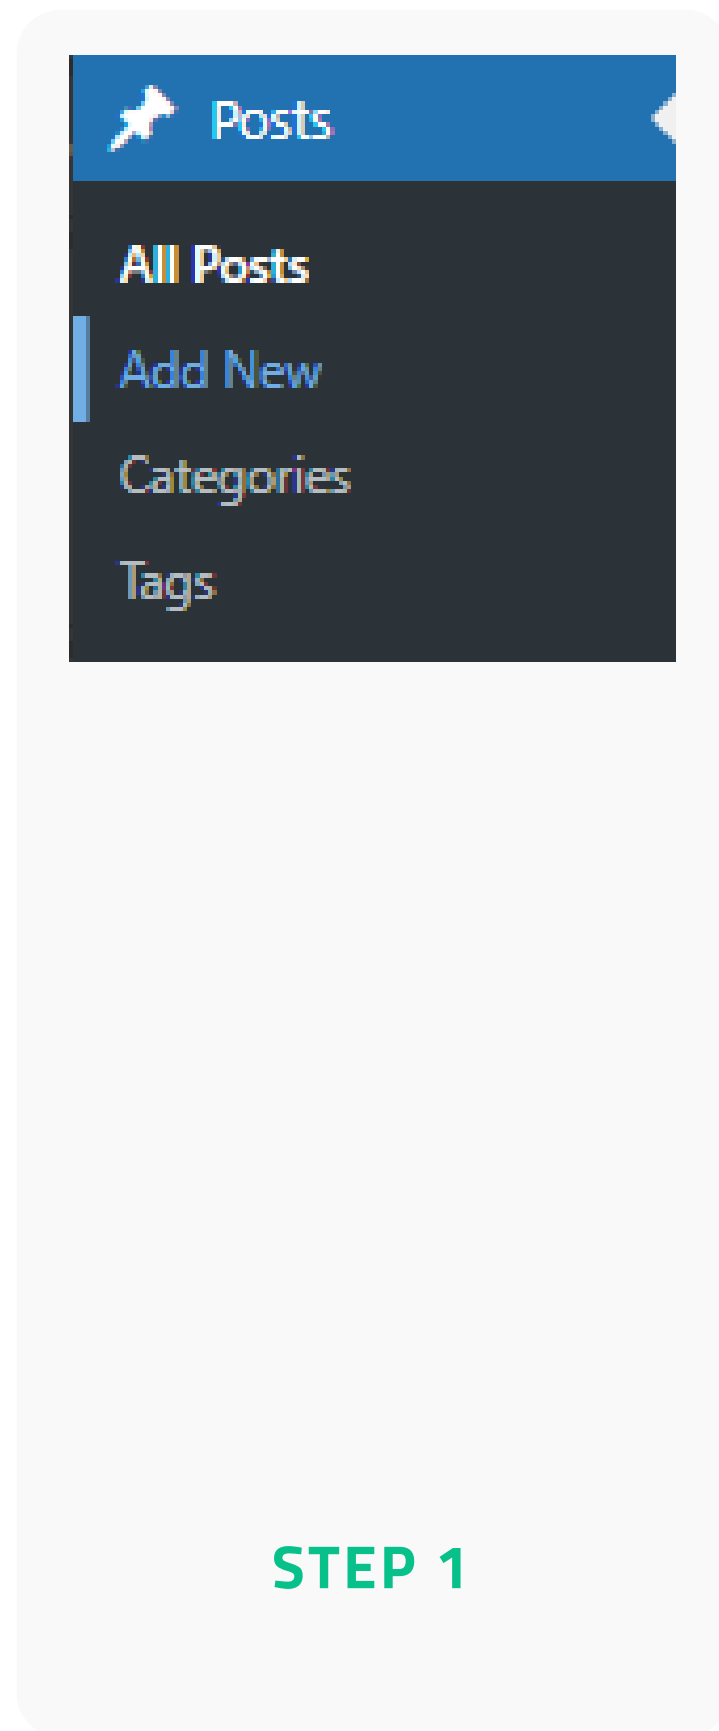

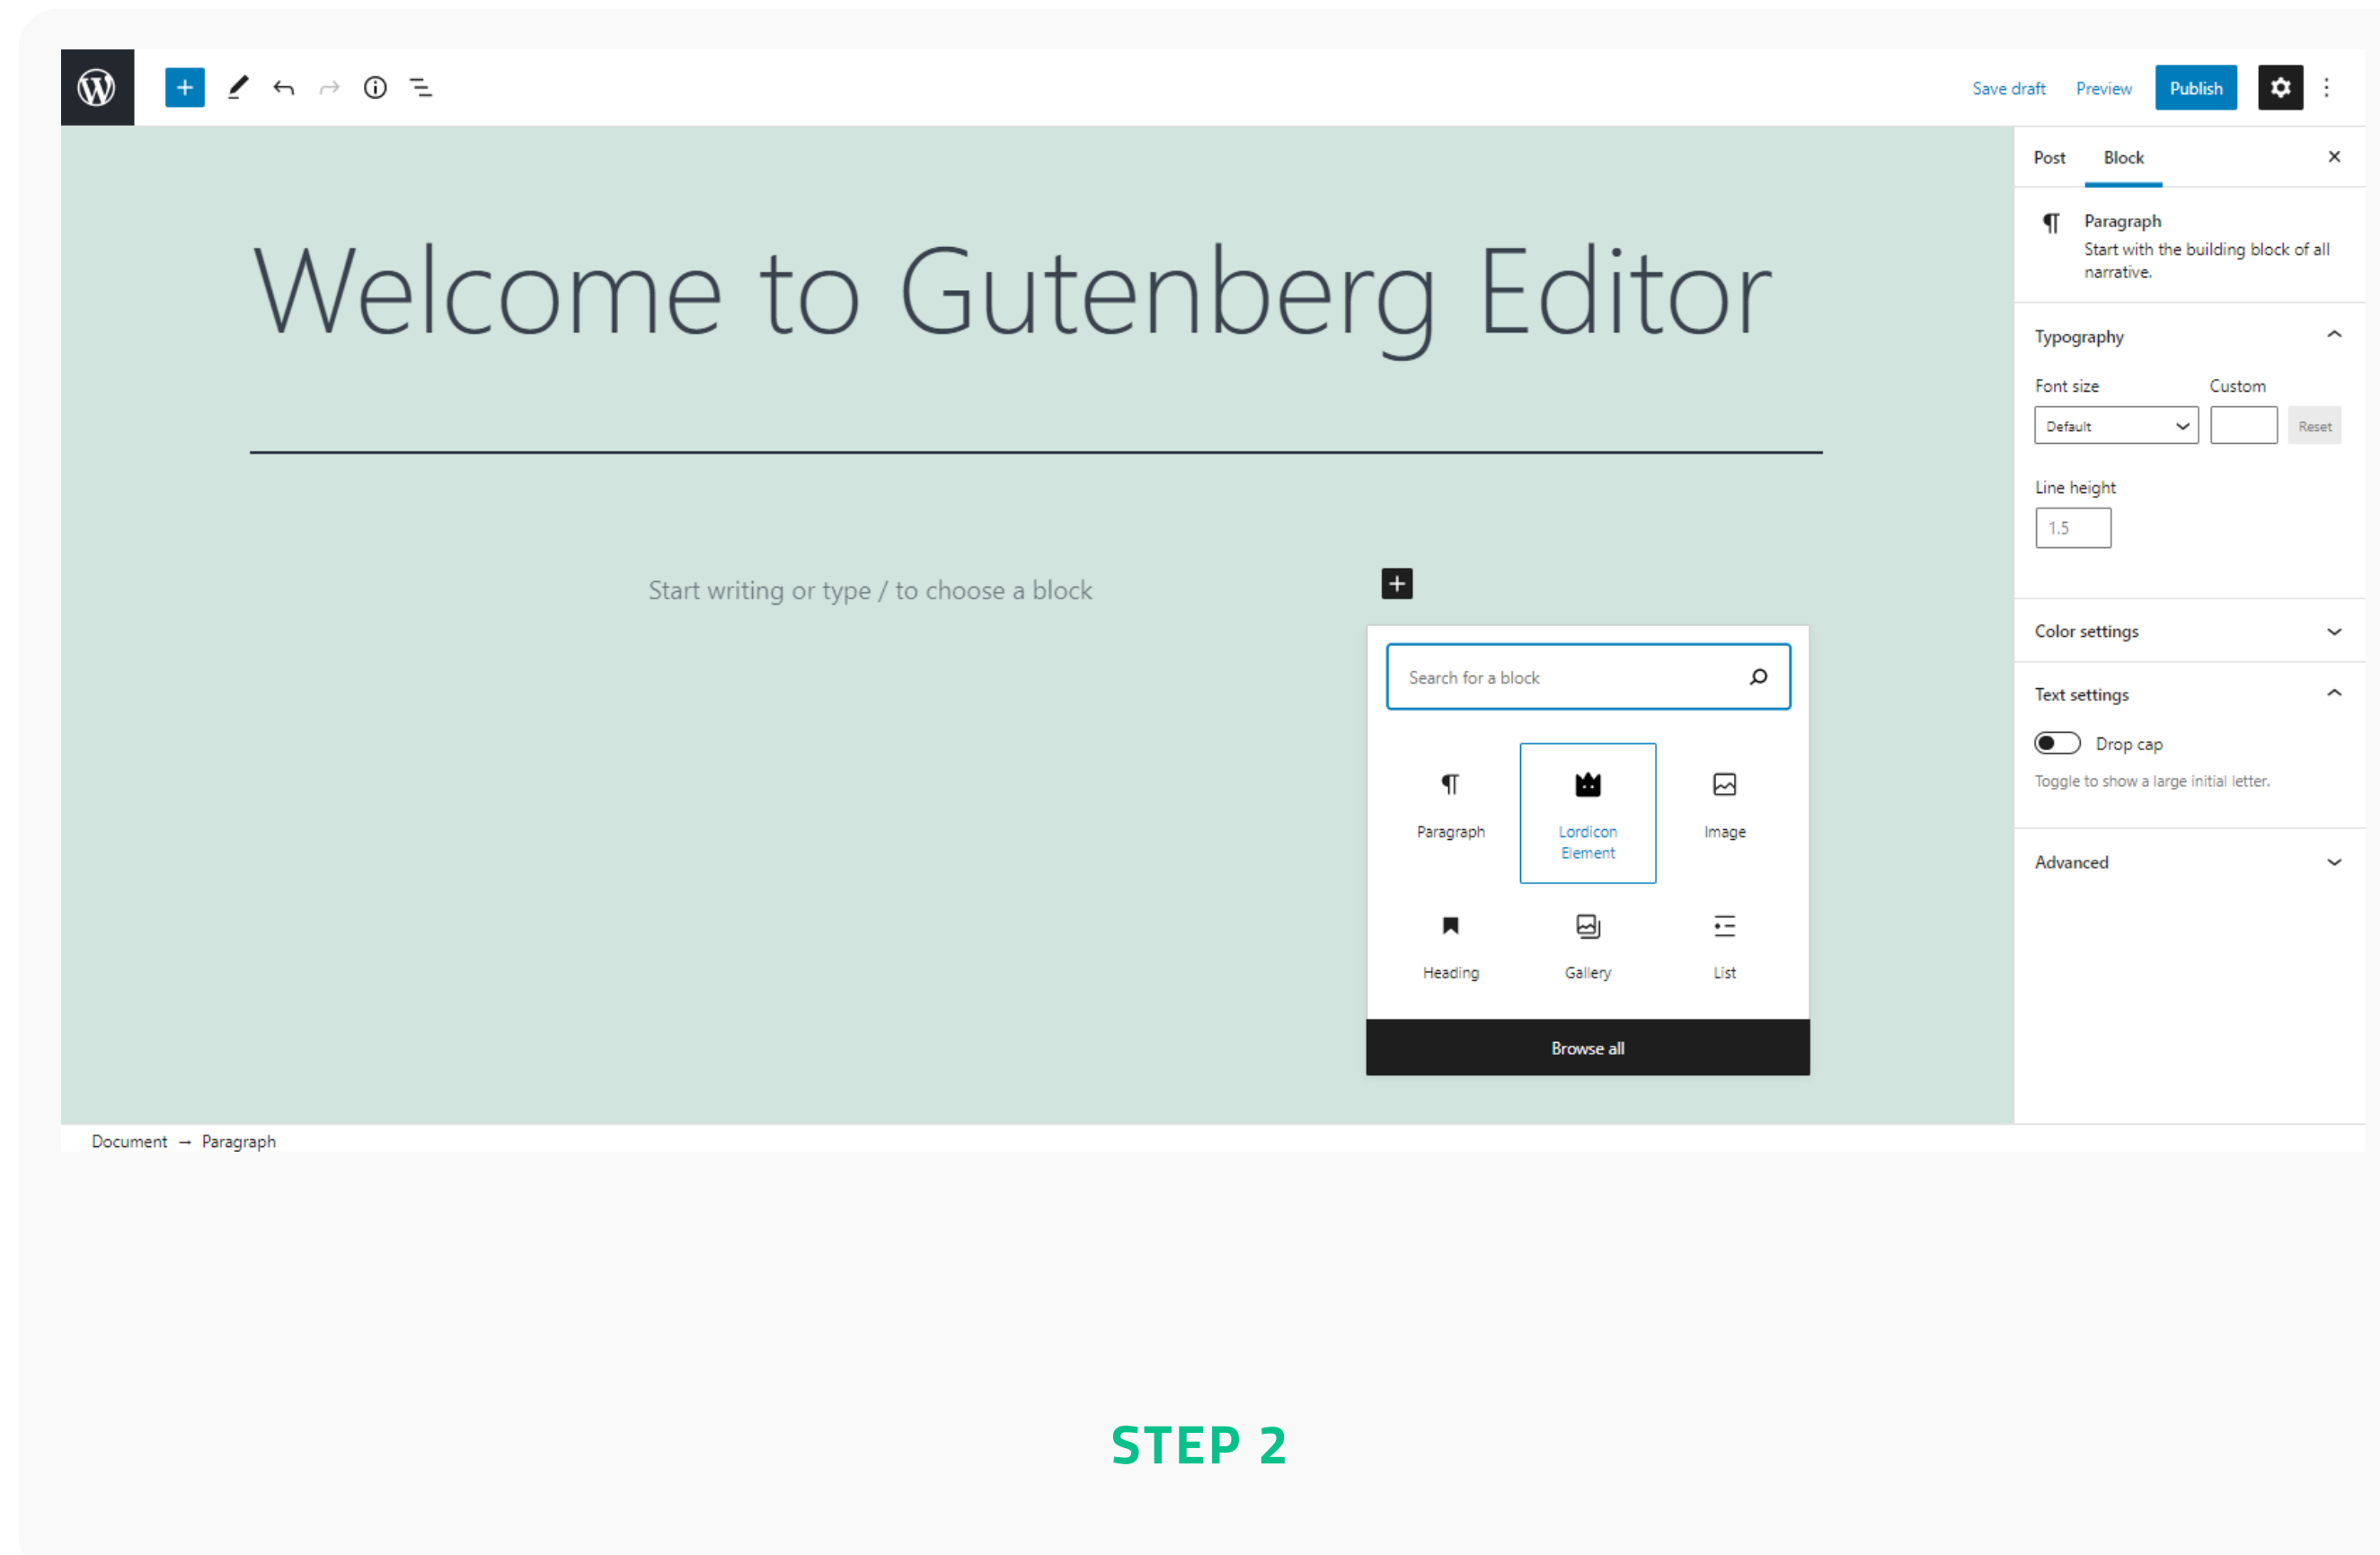

Uploading Files

Upload icons as JSON (Lottie) format from the Lordicon library or any other Lottie animation. Delete or change the description of the files at any time.

1. GO TO LORDICON LIBRARY

2. DOWNLOAD ICONS AS A JSON (LOTTIE)
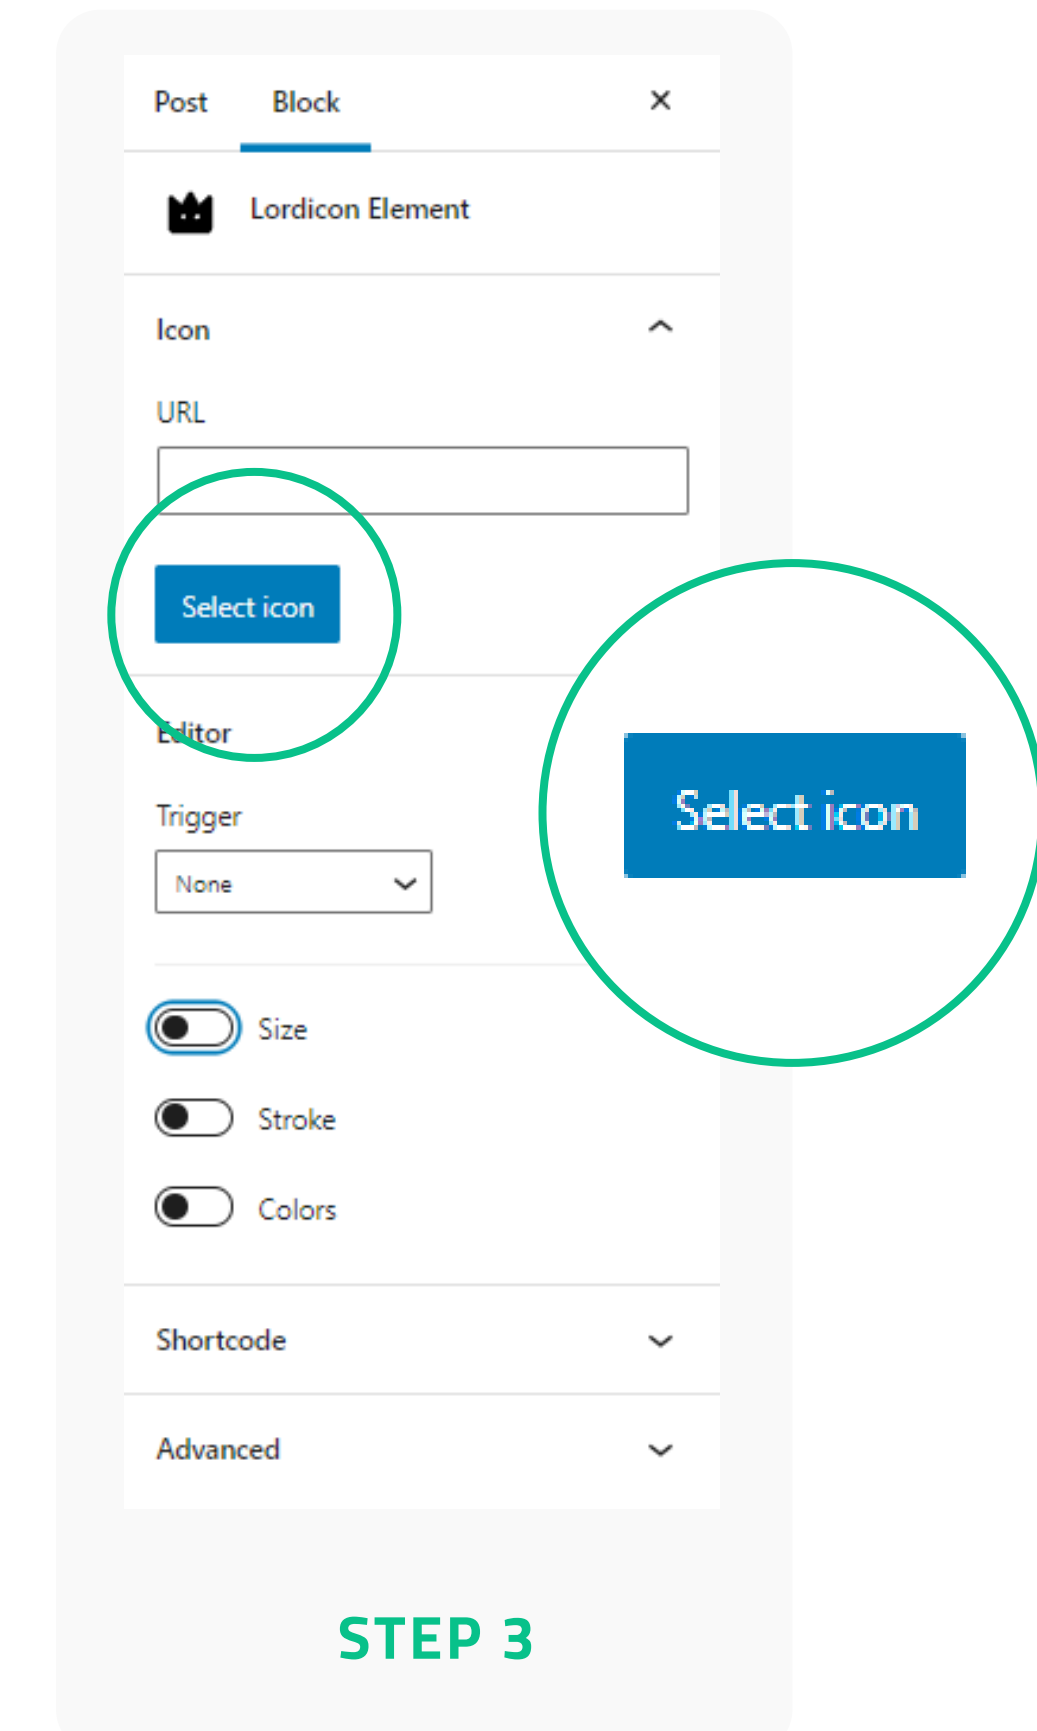

3. UPLOAD TO MEDIA LIBRARY

STEP 1

STEP 2

STEP 3
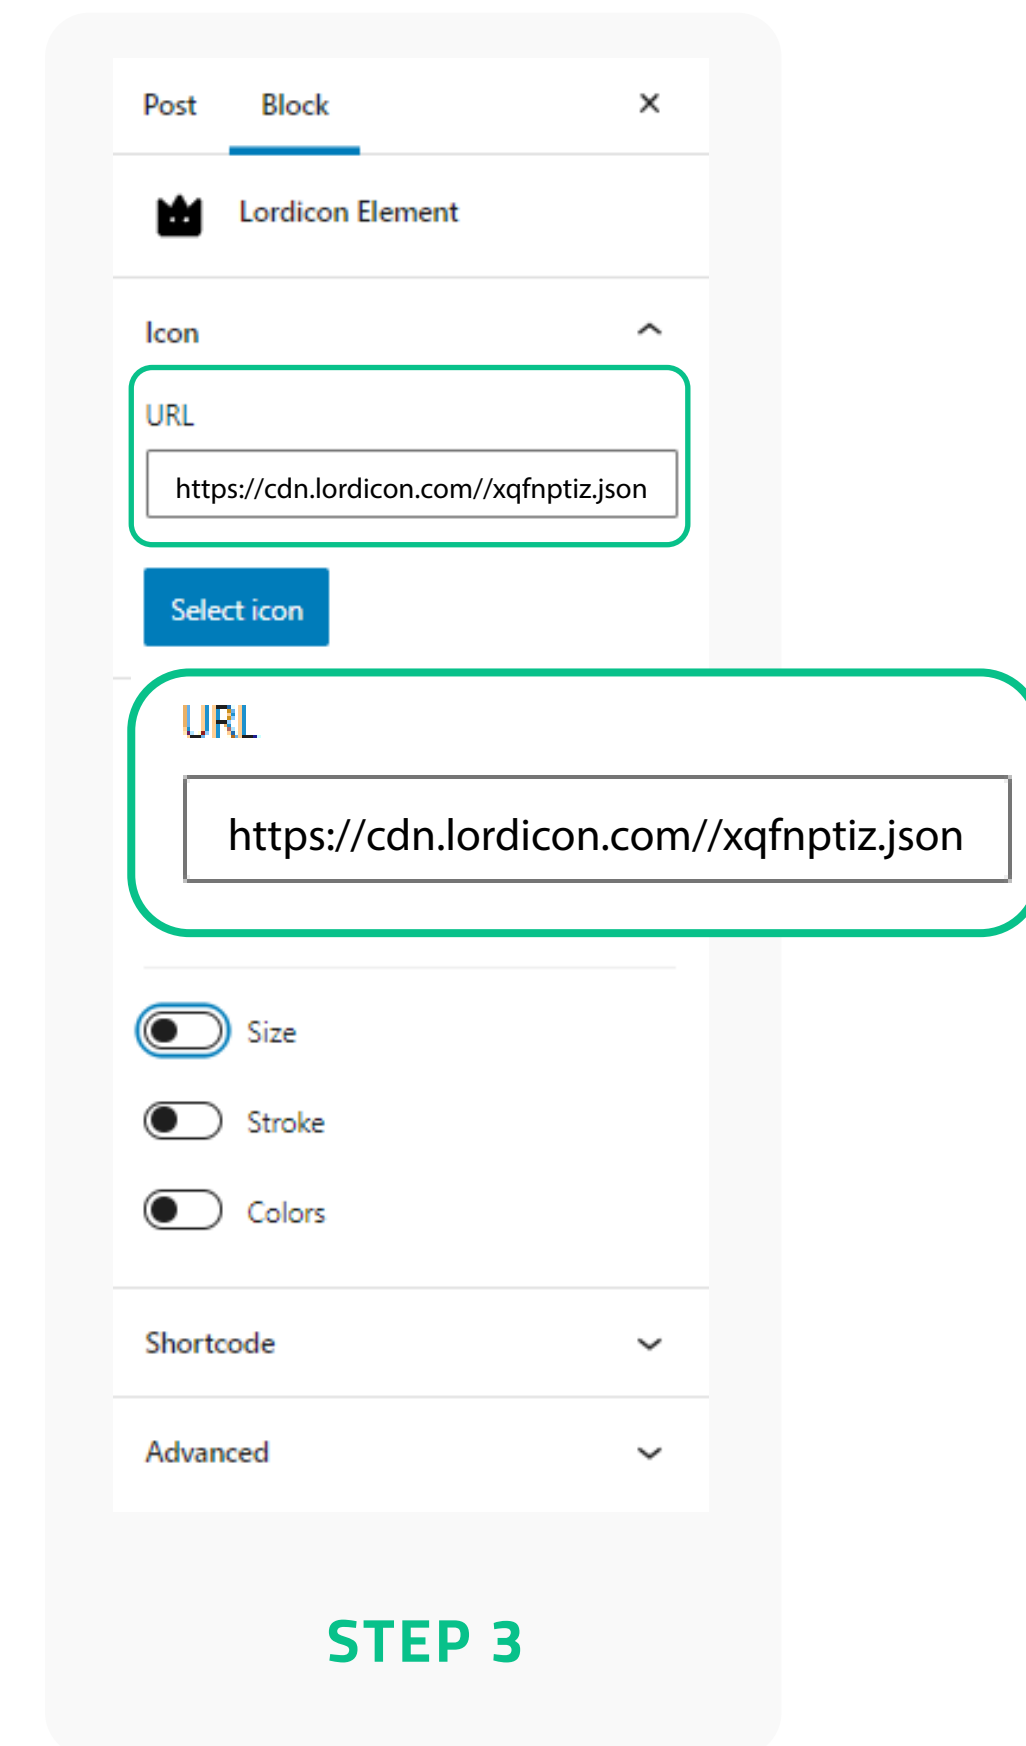

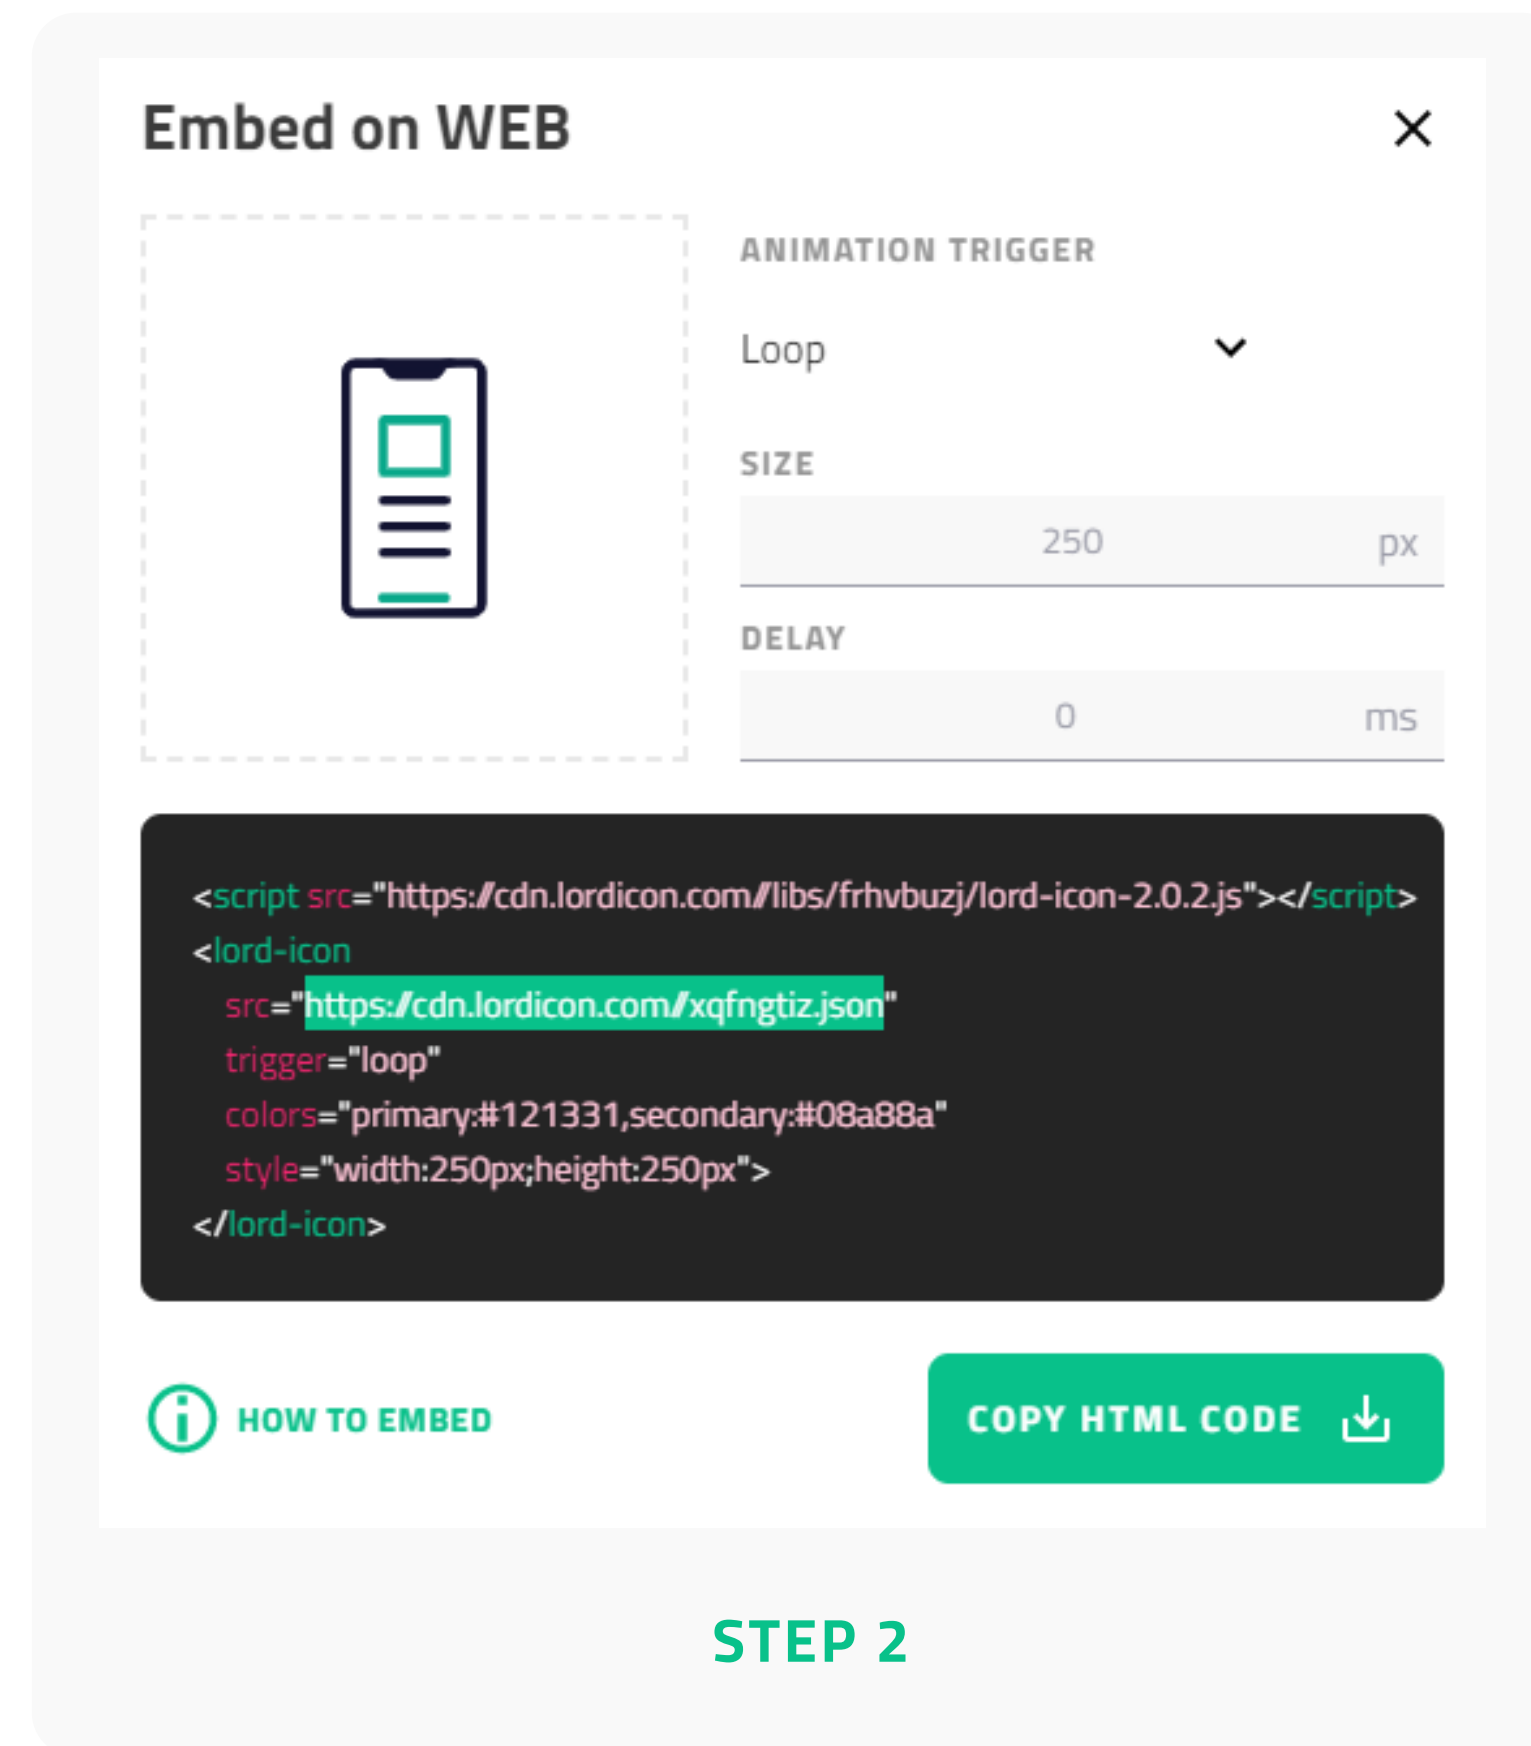

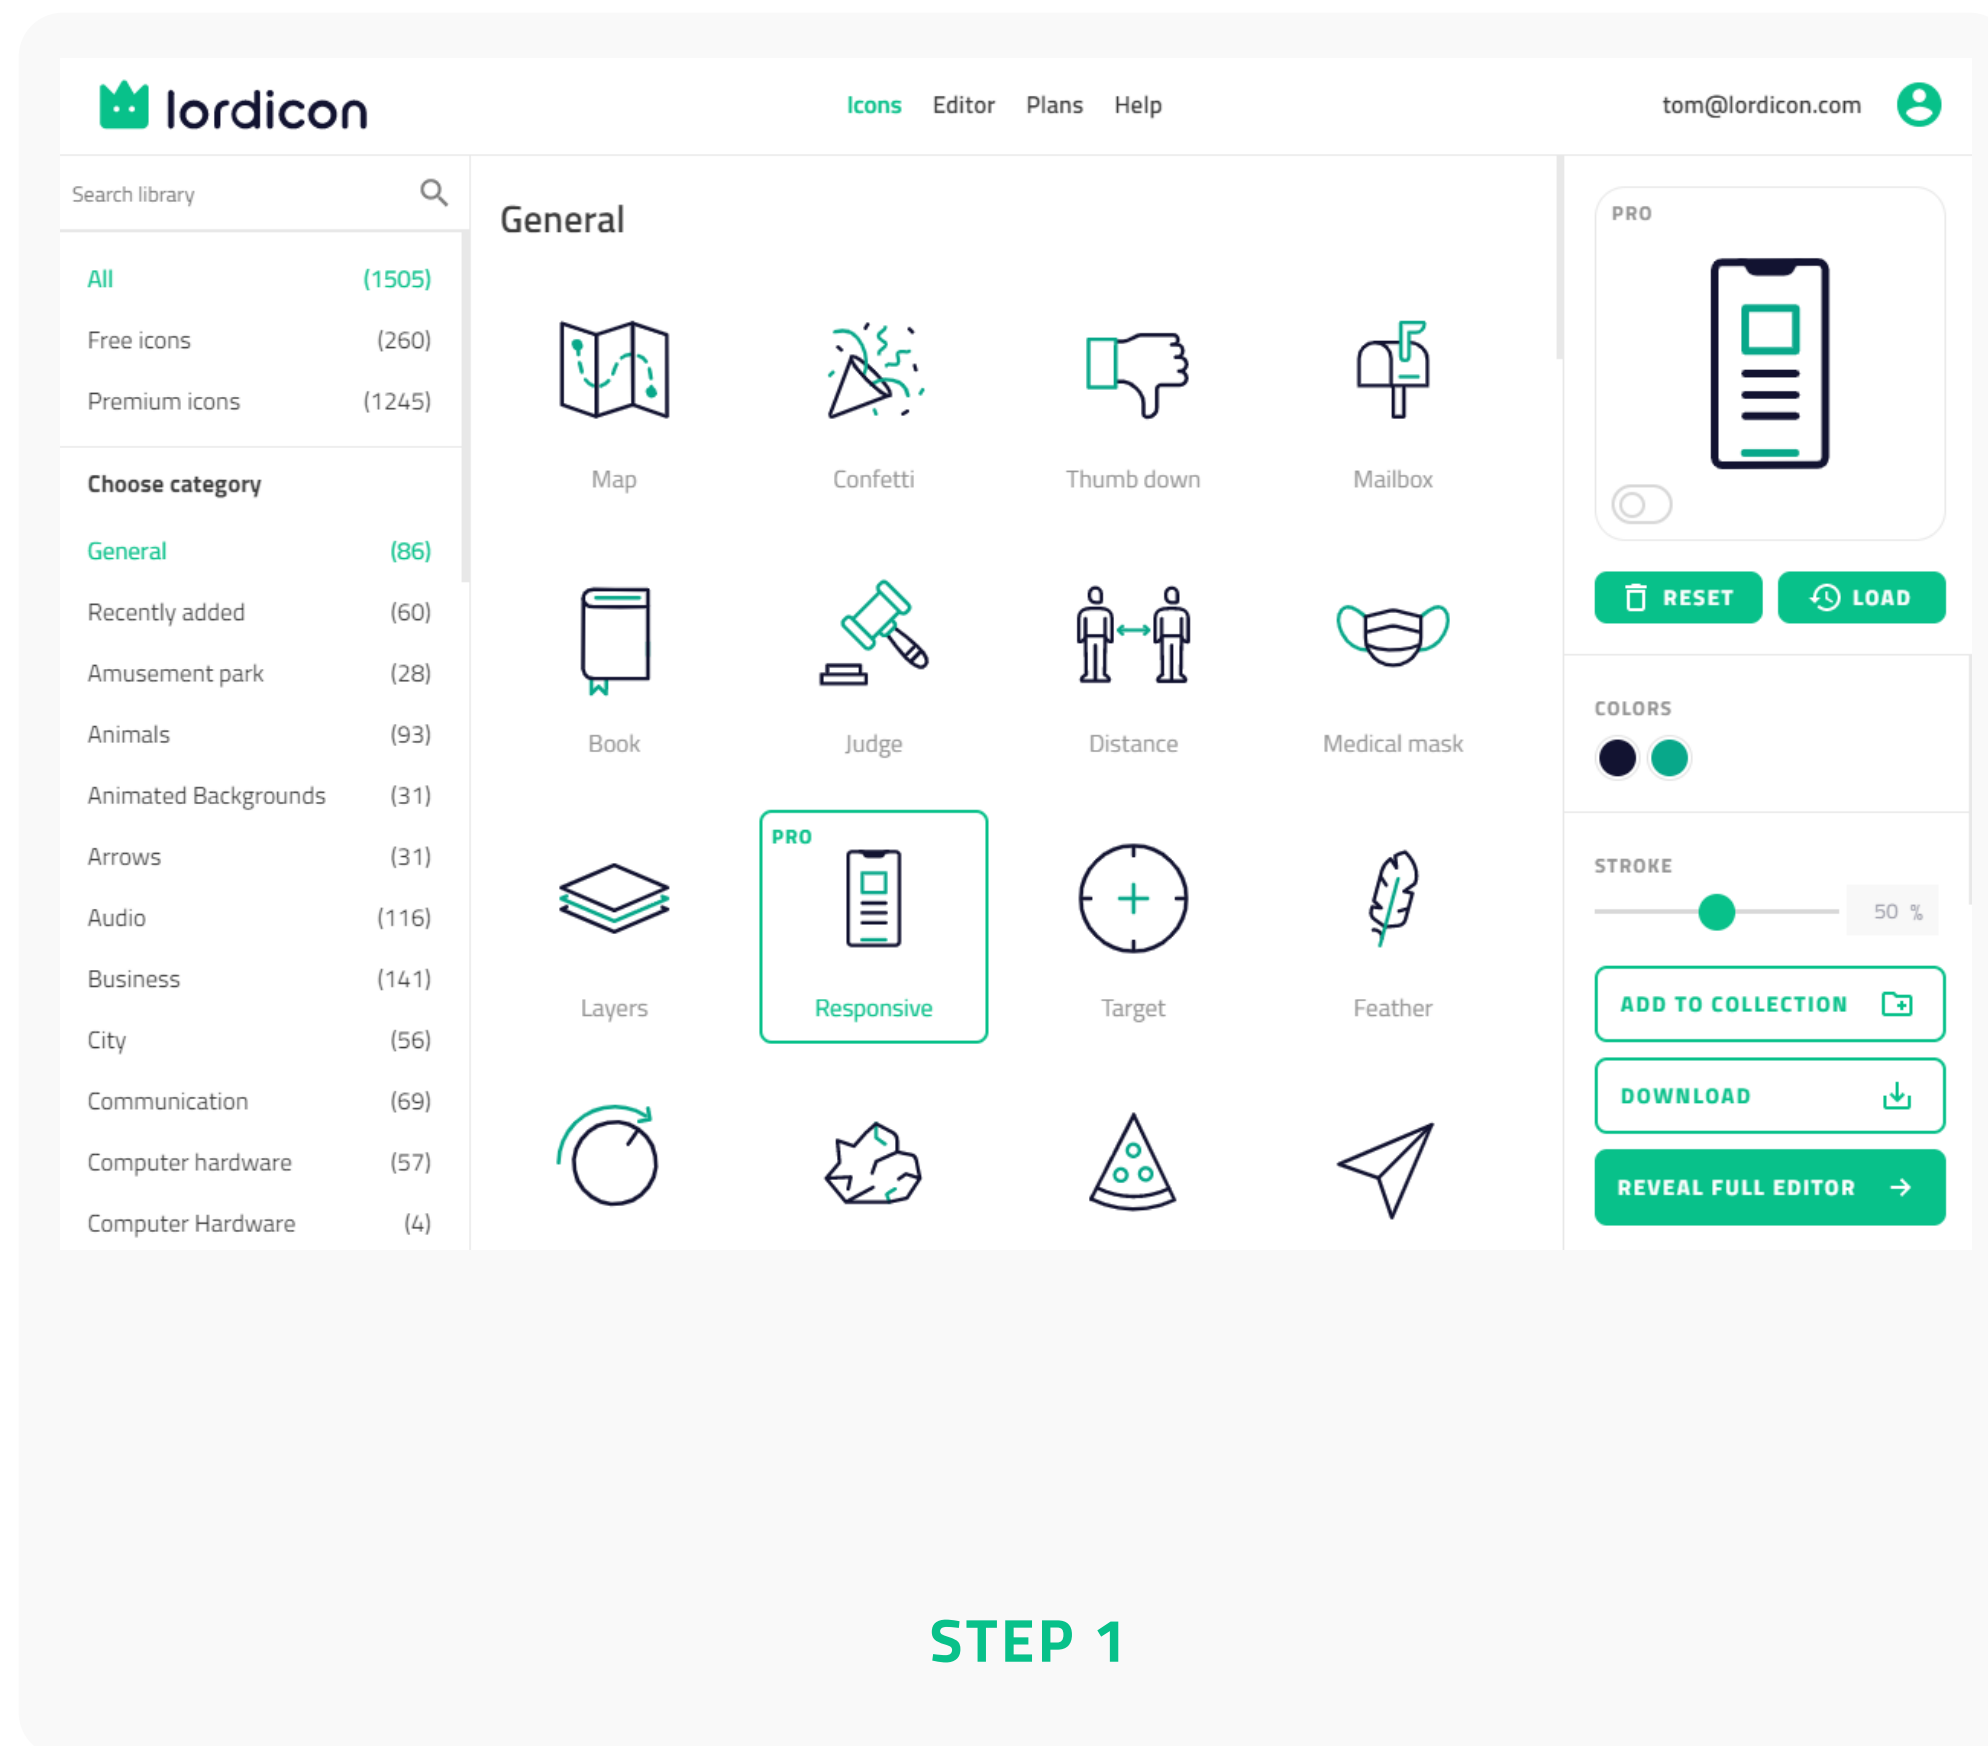

How to Use Lordicon Wordpress Plugin

Now let's create a test Gutenberg post. You click, Posts -> Add new. Then click "+" and search for Lordicon Element. A test icon has been added. Change test icon with uploaded icon from Media Library.

1. CREATE NEW POST WITH GUTENBERG EDITOR

2. CLICK ⊞ AND ADD LORDICON BLOCK

3. USE PANEL ON THE RIGHT HAND SIDE TO ADD AN ICON
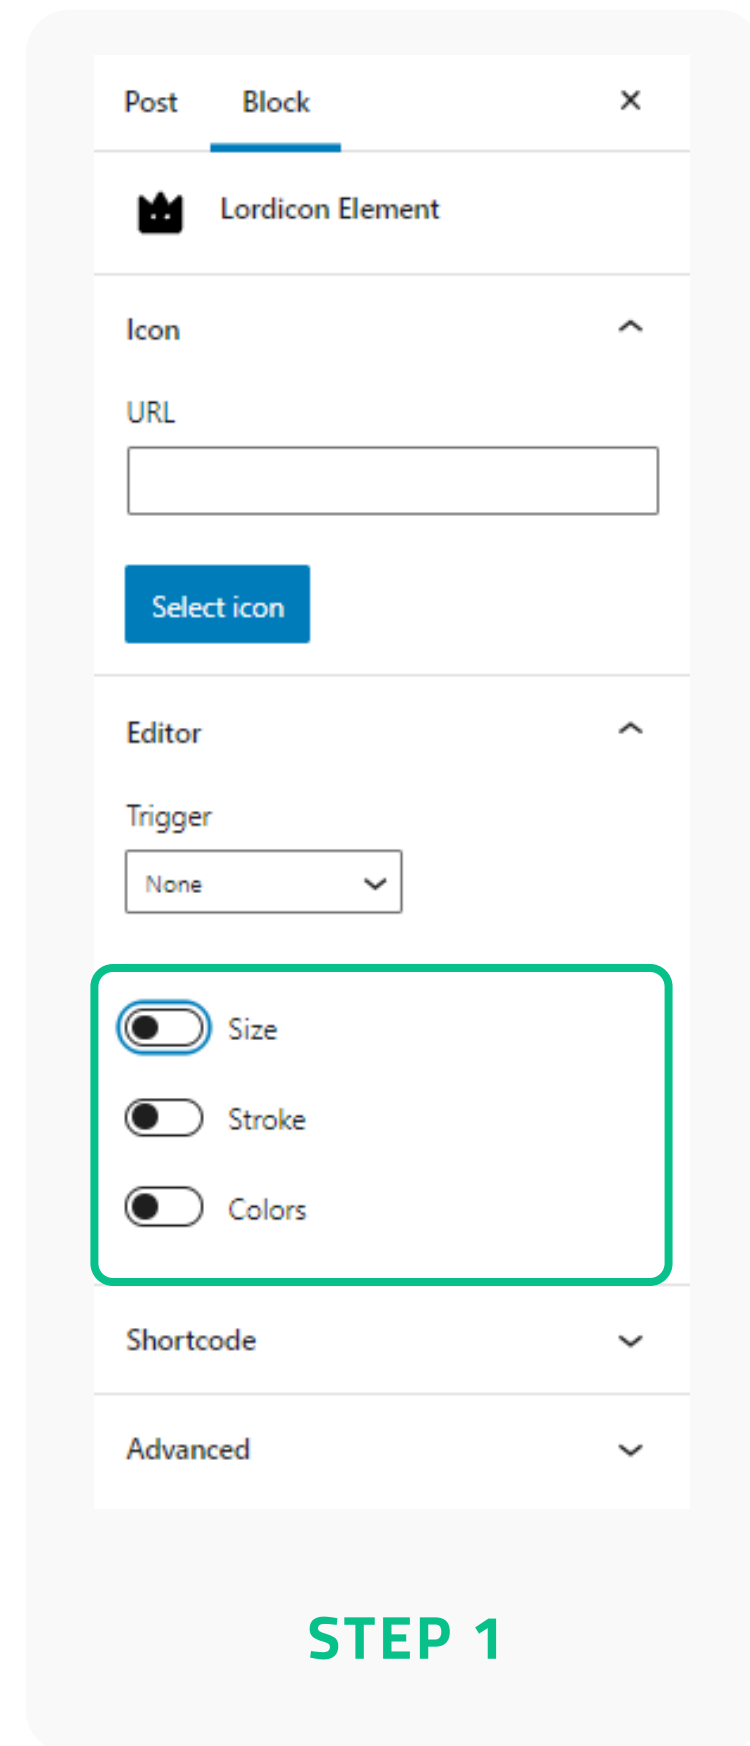

STEP 1

STEP 2

STEP 3

Alternative Icon Upload

Don't want to host icons in Media Library? Use icon URL from the „Embed HTML". Go to Lordicon library, click „Embed HTML", copy the icon URL and paste it to Lordicon WordPress Plugin.

1. GO TO LORDICON LIBRARY & SELECT AN ICON

2. EMBED AS HTML & COPY ICON SOURCE URL

3. USE PANEL ON THE RIGHT HAND SIDE TO ADD AN ICON
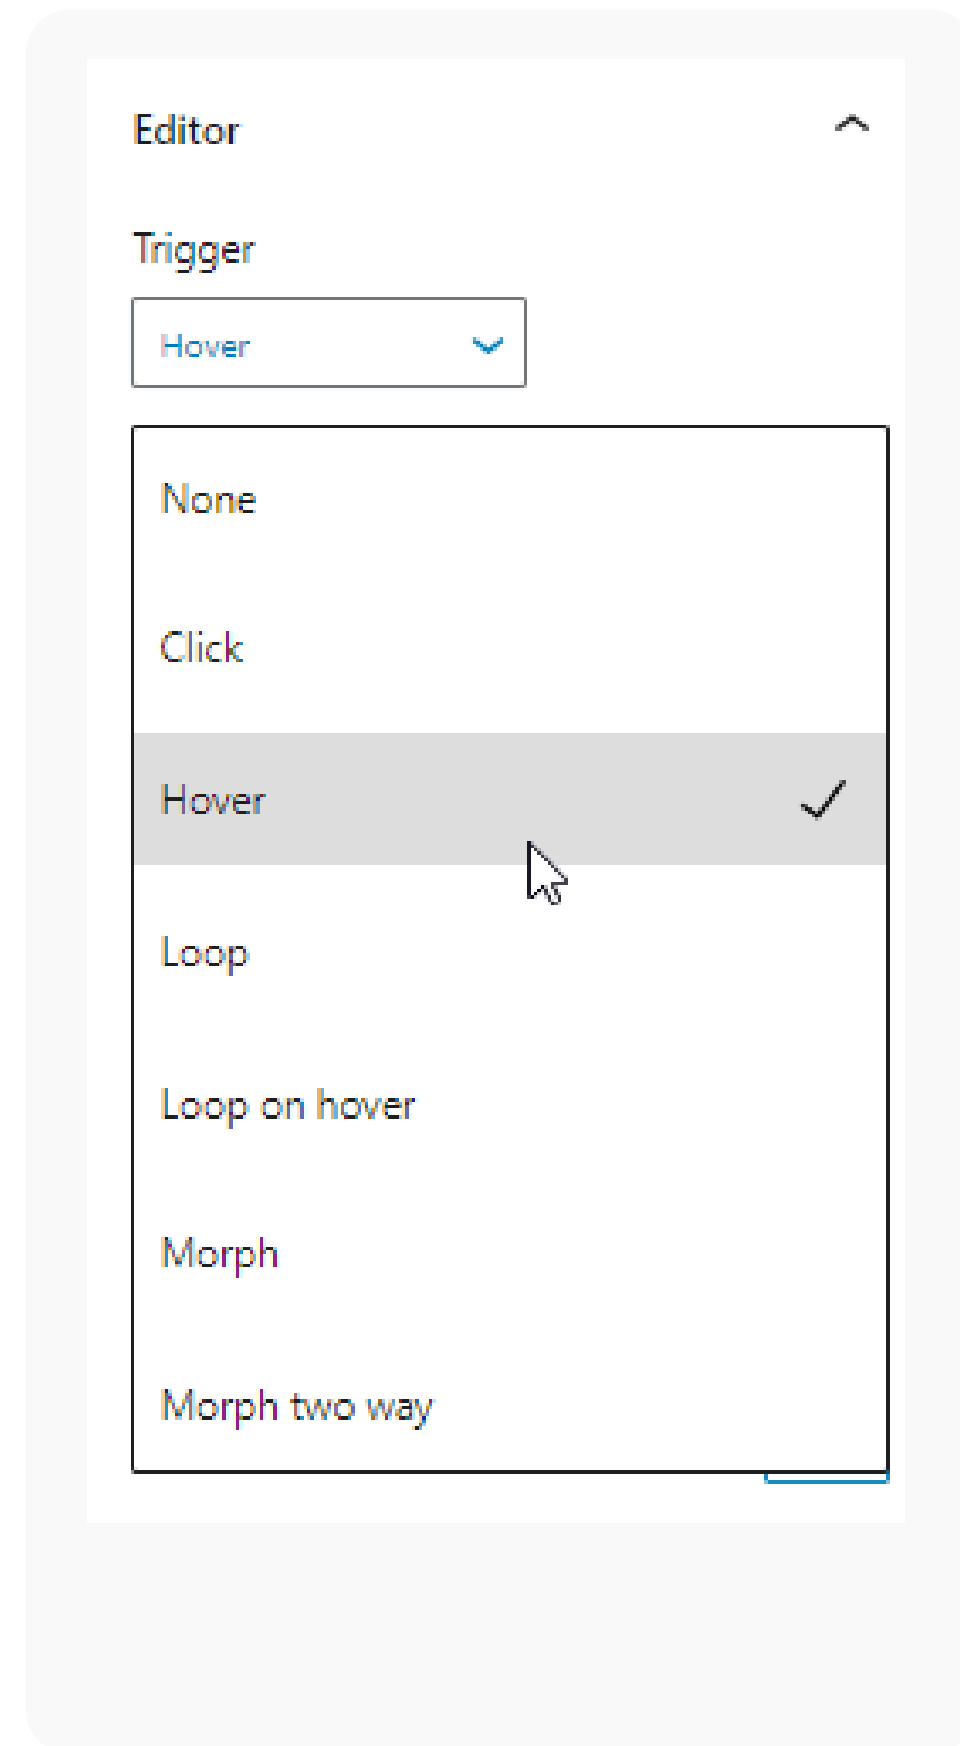

STEP 1

STEP 2

Icon Adjustments

Toggle Size, Stroke & Colors panel in order to make changes.

1. TOGGLE SIZE, STROKE AND COLORS

2. ADJUST SIZE, STROKE, OR COLORS TO CUSTOMIZE AN ICON

NONE Presents the first frame of the animation.

CLICK Plays animation from first to the last frame after clicking on the icon.

HOVER Plays animation from first to the last frame after hovering over the icon.

LOOP Plays animation from the first to the last frame infinitely, without any interactions. Does animation play too often? Set a delay time to add a break between each loop.

LOOP ON HOVER It works the same as loop trigger, but only when the cursor is over the icon. Once the cursor is off the icon the animation stops. Here, you can set delay as well.

MORPH This animation player is reserved for animated icons that as unique first and last frames. As long as the cursor is over the icon, animation plays from the first to the last frame. Once you hover off the icon, the animation go back from last to the first frame.
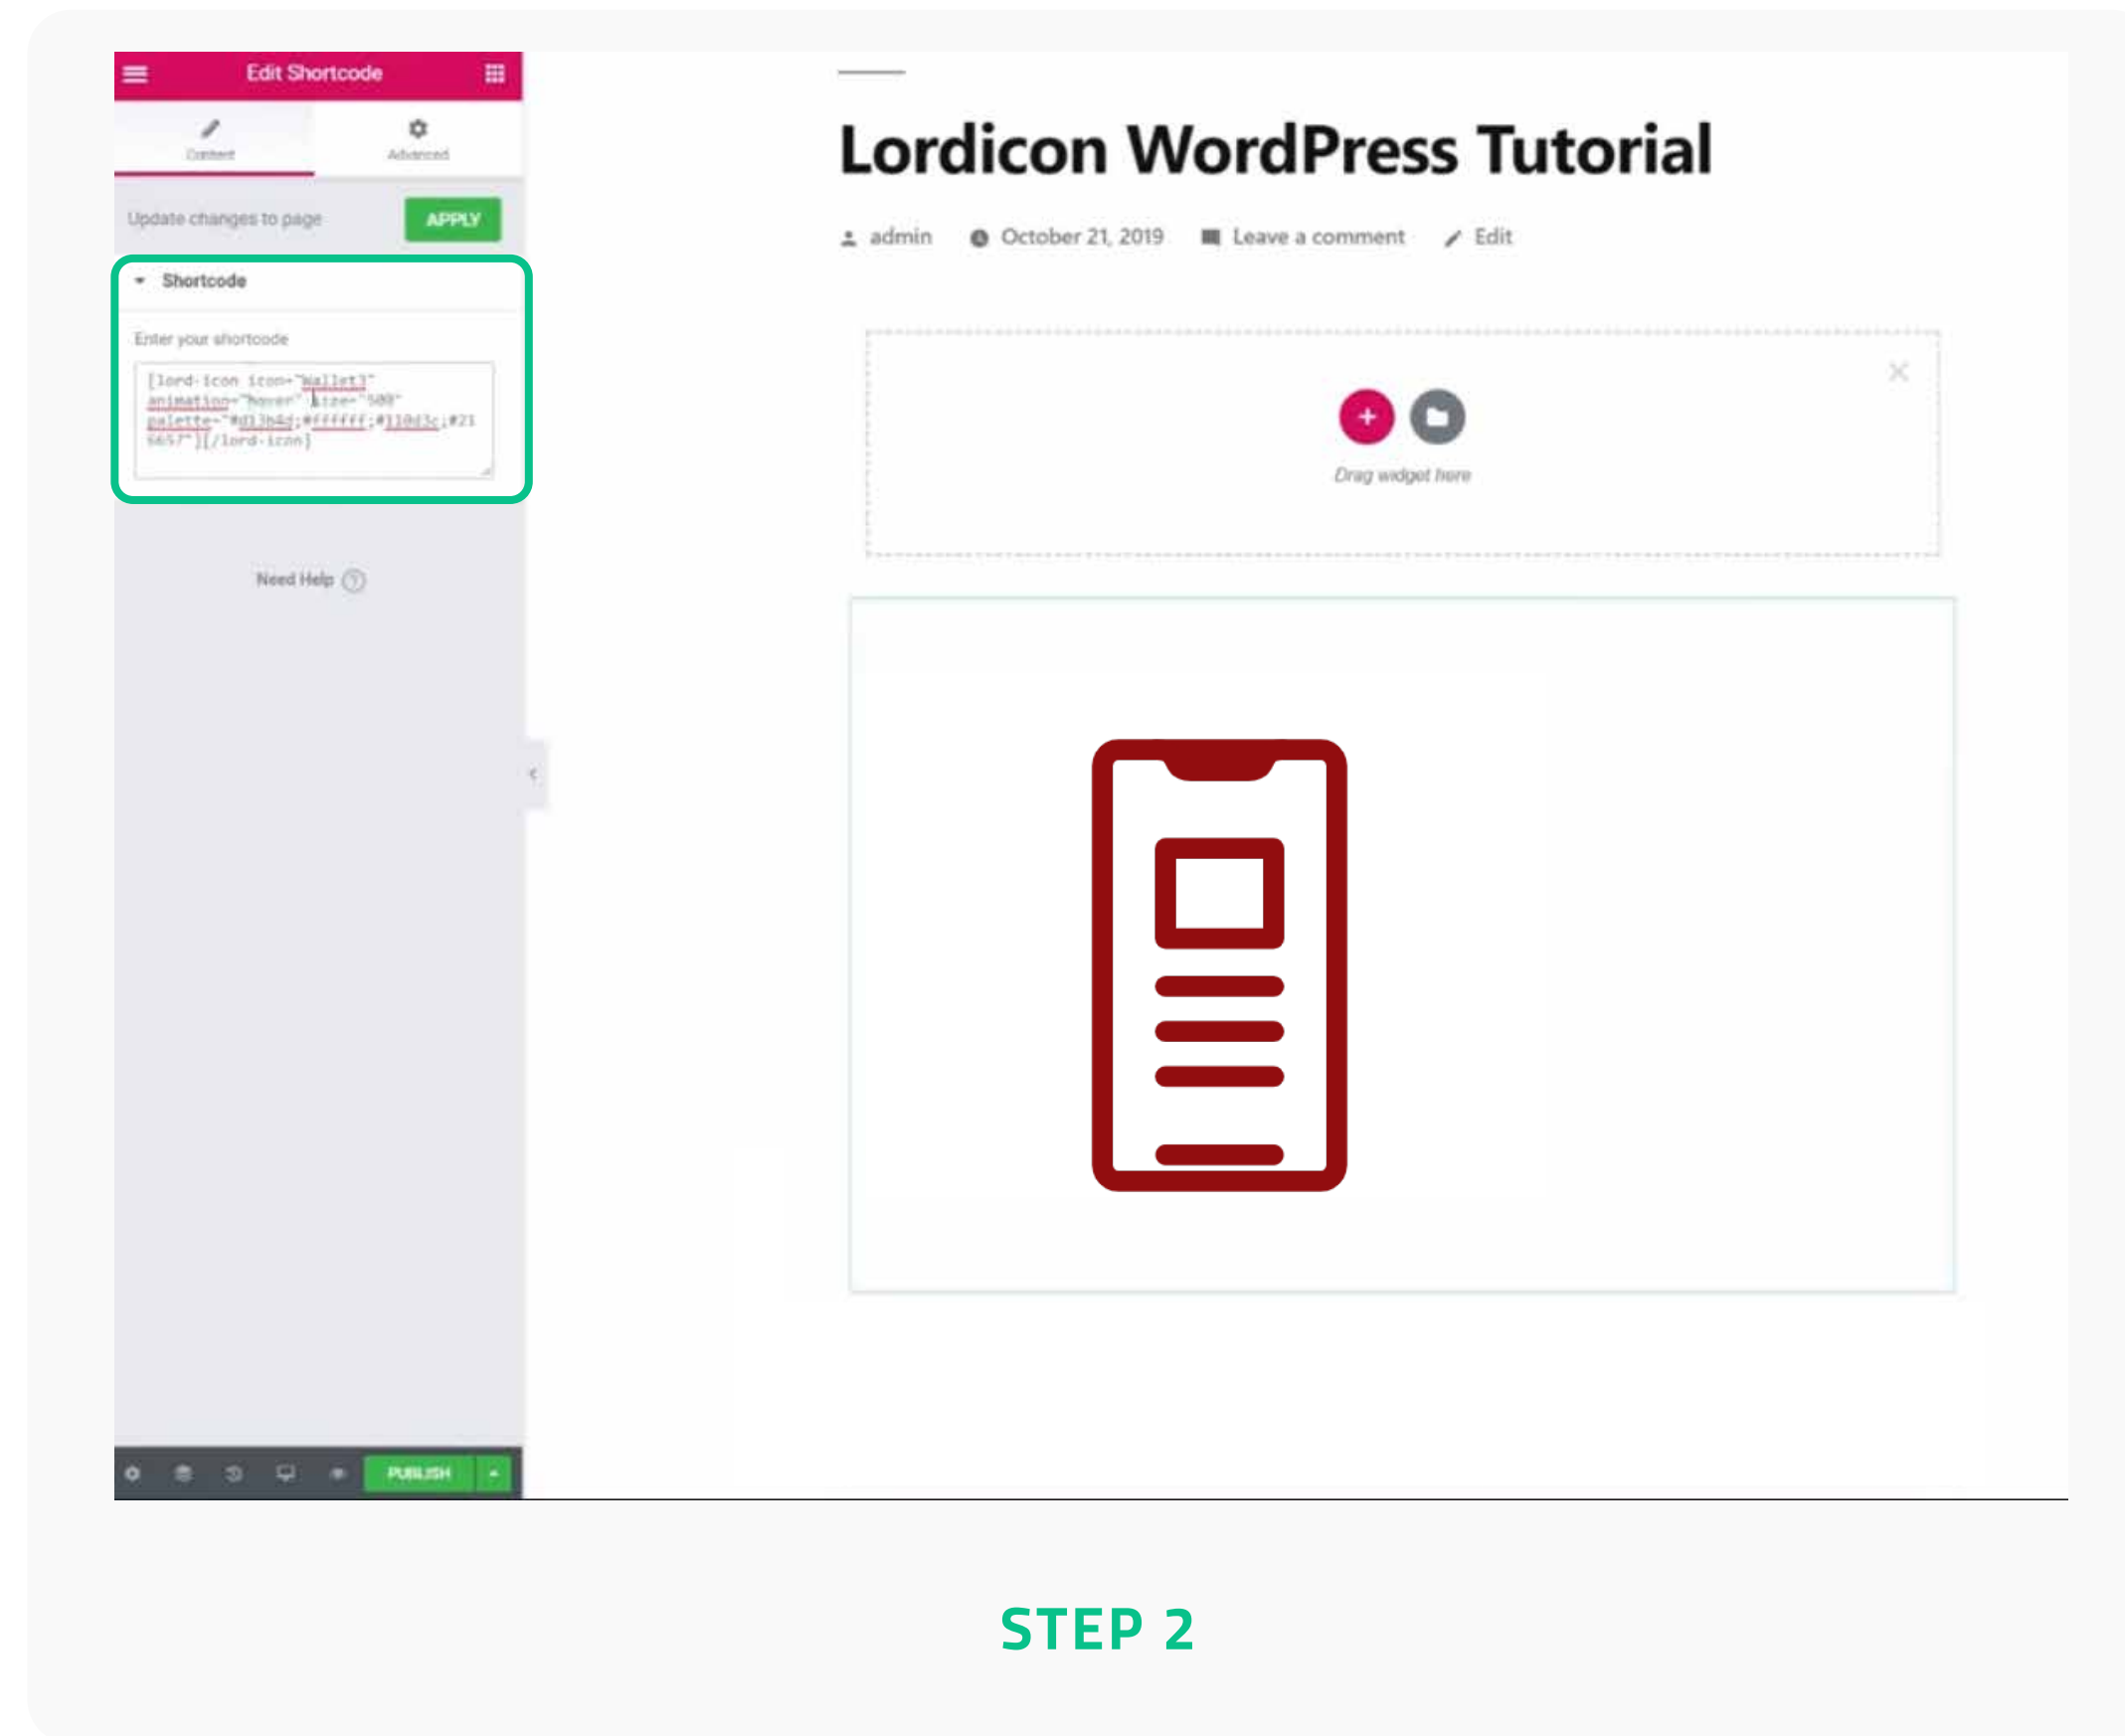

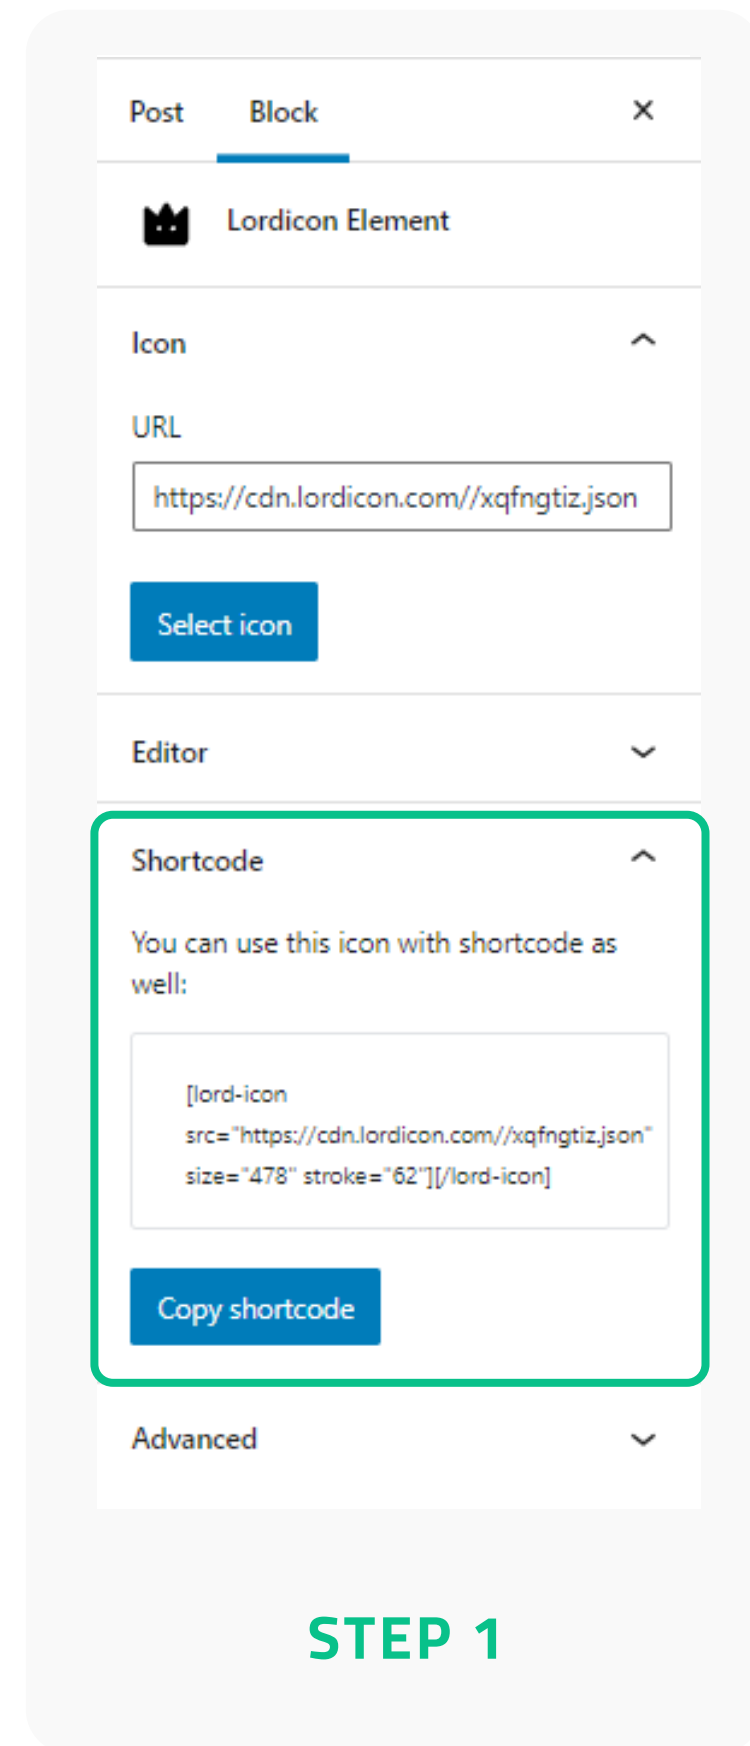

MORPH TWO WAY It triggers animation after hovering on the icon. The animation plays from first to the last frame and then immediately goes back from last to the first frame.

Animation Trigger

Now it is time to set an animation trigger. Would you like the icon to animate on hover, click or maybe loop with a 2-seconds delay between each loop? Set it up correctly to achieve the best user experience.

STEP 2

Embed it

Once you are happy with the adjustments, you can either save your post or head into the „Shortcode" section, copy the code and embed it as a Block in web builders like Divi, Elementor, or any other website project including custom themes.

1. REVEAL SHORTCODE SECTION

2. COPY & PASTE SHORTCODE IN YOUR PROJECT OUTSIDE GUTENBER EDITOR
